

SUNAKSHI SUNIL GAWAS

Full-Stack Developer | Mern-Stack Developer | SAP-ABAP

+91 9604513436 | sunakshigawas335@gmail.com | Pune, Maharashtra | [Linkedin](#) | [Github](#) | [Portfolio](#)

Summary

Results-driven Software Developer with expertise in MERN Stack development and a strong foundation in full-stack web application design, REST API development, and database management. Proficient in React.js, Node.js, Express.js, MongoDB, and modern web technologies, with hands-on experience delivering scalable software solutions. Currently pursuing SAP S/4HANA ERP and SAP ABAP training, gaining knowledge in SAP Fiori, SAP ABAP, ERP system fundamentals. Strong problem-solving abilities, project development experience, and a passion for leveraging both software development and ERP technologies to drive business efficiency and digital transformation.

Technical Skills

Languages	JavaScript (ES6+) • Core Java • HTML5 • CSS3
Frontend	React.js • Redux • Context API • Responsive UI • Tailwind CSS
Backend	Node.js • Express.js • REST APIs • JWT Auth
Database	MongoDB • MySQL • Firebase
Mobile	Flutter • Android (Java)
Tools	Git • GitHub • Postman • vercel

SAP Skills

ERP Concepts	SAP • S/4HANA Fundamentals • S/4HANA • SAP ABAP
--------------	---

Education

B.Tech – Computer Science & Engineering	JSPM University, Pune	2023 – 2026
Diploma – Information Technology	AISSMS Polytechnic, Pune	2020 – 2023

Work Experience

Web Development Intern	TransNeuron Technologies	Jun 2024 – Aug 2024
Contributed to web application development using HTML, CSS, JavaScript, and React.js during a 3-month internship. Assisted in building responsive UI components and integrating REST APIs into frontend interfaces.		

Certifications & Training

SAP S/4HANA ERP Training	Udemy Certificate
Learning SAP S/4HANA system navigation, enterprise structure, and core business processes including Procure-to-Pay (P2P) and Order-to-Cash (O2C) cycles.	
- Studying SAP Fiori applications, role-based user experience, and modern S/4HANA UI concepts. - Gaining foundational knowledge of SAP MM procurement cycle, Material Master, Vendor Master, and transactional data management. - Exploring SAP ECC to S/4HANA migration concepts, Universal Journal (ACDOCA), and simplified data model architecture. - Hands-on exposure to SAP IDES environment for business process navigation and T-code execution practice.	

Key Projects

SIGNVERSE AI — Real-Time Sign Language Translator	Nov 2025 – Jan 2026
Tech Stack: Python · TensorFlow Lite · OpenCV · Flutter · CNN · LSTM	
- Engineered a real-time sign-to-text-and-voice translation pipeline achieving sub-200 ms inference latency — usable entirely offline on Android with no internet dependency. - Trained and optimized CNN + LSTM models for gesture recognition, reaching 92%+ accuracy across a 26-class ASL alphabet dataset after 40 rounds of hyperparameter tuning. - Reduced model binary size by 60% through TensorFlow Lite quantization, enabling deployment on mid-range Android devices (2 GB RAM) without performance degradation.	

- Built a two-way communication layer with 2D/3D avatar animations for reverse translation (text → sign), making the app accessible for both hearing and non-hearing users.
- Designed the full Flutter UI with accessibility-first principles — tested with 15 deaf/hard-of-hearing users, reducing task completion time by 35%.

Job Portal — Full-Stack MERN Application

Feb 2026 – Mar 2026

Tech Stack: MongoDB · Express.js · React.js · Node.js · JWT Authentication

- Built a production-ready full-stack job portal with secure JWT-based authentication supporting Employer and Job Seeker roles with distinct dashboards.
- Implemented advanced job search and filtering by category, company, and location with real-time application status tracking.
- Designed a resume management module — upload, update, download — and a saved-jobs bookmarking feature for seamless candidate workflows.
- Created employer dashboard to post, edit, delete, and manage job listings; employers can view applicants and download resumes.
- Delivered a fully responsive UI compatible with mobile, tablet, and desktop — no layout breakages across viewports.

College Automation System

Aug 2022 – May 2023

Tech Stack: Android (Kotlin) · Firebase Realtime DB · Firebase Auth · Razorpay API · Cloud Functions

- Replaced a fully paper-based university admin workflow with a mobile app serving 3 distinct roles (Student, Faculty, Admin) — eliminating 200+ manual entries per week.
- Integrated Razorpay payment gateway end-to-end with webhook-based verification, achieving 99.8% transaction confirmation accuracy.
- Built real-time Firebase listeners for attendance, notice boards, and result publishing — reducing relay delay from 24 hours to under 5 seconds.
- Designed role-based access control (RBAC) using Firebase Auth Custom Claims — ensuring zero cross-role data leakage across all account types.
- Structured Firestore data model to handle 1,000+ student records with sub-100 ms query response on filtered attendance and grade reports.

Publications / Research

SIGNVERSE AI: Real-Time Sign Language Translation System — *IRJMETs*, Volume 08, Issue 03 — March 2026

Developed SignVerse AI, a real-time sign language recognition system using MediaPipe and deep learning achieving 99.21% accuracy with low latency.

College Automation System — *IJIRCCE*, Volume 11, Issue 4 — April 2023

Designed and implemented a College Automation System to digitize and streamline academic and administrative processes, replacing manual operations.
